

Waleed Ali

Engineering Manager / Staff Software Engineer / Systems Architect

✉ waleedali070@gmail.com | github.com/WaleedAli070 | [in linkedin.com/in/syed-waleed-ali](https://www.linkedin.com/in/syed-waleed-ali)

Summary

Engineering Manager and Staff Software Engineer with ~10 years of experience building scalable platforms and leading high-impact teams. Currently managing 8+ engineers while standardizing company-wide performance frameworks and 360-degree feedback systems. Expert at bridging technical execution with executive strategy by automating board-level KPI scorecards, i.e. DORA metrics, to monitor departmental health. Combines deep technical leadership in distributed systems, cloud migrations and OpenTelemetry observability with rigorous security governance, including leading SOC 2 and ISO 27001 compliance audits.

Experience

Teamo — Engineering Manager *(Aug 2023 – Present / Remote)*

- **Manage** a high-performing team of 8+ engineers for the SoHookd platform, overseeing end-to-end delivery, capacity planning, and technical excellence.
- **Pioneered** and led the implementation of company-wide 360° feedback reviews and performance management systems that have served as the internal benchmark for 2+ years.
- **Mentor** engineers and Tech Leads to align personal career growth with organizational OKRs while standardizing onboarding to accelerate time-to-productivity.
- **Partner** with the CTO and Product Owners to define product roadmaps and manage sprint delivery and reliability for a wellness platform with 40K+ MAUs.
- **Direct** annual SOC 2 Type II and ISO 27001 compliance audits, including managing external penetration testing and rapid vulnerability remediation.
- **Architected** a cross-functional Executive Scorecard via n8n to automate the tracking of company wide metrics and growth KPIs for Board-level reporting.
- **Serve** as Staff Engineer for Round Treasury, orchestrating a modular migration to AWS CDK and optimizing CI/CD pipelines for increased deployment velocity.

Emumba — Senior Software Engineer *(Jan 2021 – Aug 2023 / Islamabad, PK)*

- Served as a senior engineer on distributed systems projects in the Zero Trust Networking space.
- Led cross-org initiatives around architectural decision-making, engineering best practices, and performance benchmarking.

- Improved the hiring pipeline by standardizing interview formats, question sets, and feedback practices, resulting in more consistent evaluations and faster decision-making.
- Designed and led onboarding processes for both frontend and backend engineers by documenting key activities and milestones for their first weeks, reducing ramp-up time and improving team integration.
- Mentored junior to mid-level engineers through regular 1:1s and collaborative side projects, fostering skill development, confidence, and deeper team engagement.

Automotive AI — Technical Lead *(Sep 2018 – Dec 2020 | Islamabad, PK)*

- Promoted from Software Engineer to Technical Lead within the first year, leading a team of 5–7 engineers building simulation tools used by major automotive clients.
- Introduced architectural improvements and refactors that enabled the company to productize previously internal tooling.
- Played a key role in engineering process formalization, establishing code quality standards, versioning workflows, and QA pipelines.
- Mentored new hires and conducted training workshops on system design and debugging techniques.

AN10, Heurixtics, HireNinja — Software Engineer *(2016 – 2018)*

- Developed Constellation (IoT BI dashboard); handled data from 1800+ devices, commercialized post-hackathon.
- Gained early experience in agile environments, tight delivery schedules, and building products from scratch.

Projects

Round Treasury (Teamo)

Round is the AI-powered finance command system that unifies treasury, payments, FX, and reconciliation in one intelligent platform.

- Identified critical bottlenecks in legacy infrastructure and orchestrated a migration to a modular **AWS CDK** environment, improving maintainability and reducing cloud overhead.
- Leading the implementation of **OpenTelemetry (OTel)** for distributed tracing and performance monitoring; developed custom CloudWatch dashboards to improve Incident Response (MTTR) and system reliability.
- Resolved all infrastructure-related findings for ISO 27001:2022 certification, ensuring the platform met strict fintech security requirements.

SoHookd (Teamo)

Wellness platform serving 40K+ monthly users, rebuilt from two legacy codebases into a unified, production-grade system on GCP.

- Led re-architecture and full rebuild of the platform, consolidating NoSQL and SQL systems into a unified SQL-based application.
- Executed critical financial data migration, transferring \$954K+ in user balances without losing a single dollar during the platform migration.
- Took over lead responsibility for SOC 2 audits from the CTO; successfully navigated the technical audit process and coordinated with third-party security firms for rigorous penetration testing.
- Managing full-cycle agile delivery, ensuring team capacity is optimized against high-pressure deadlines while maintaining 99.9% platform availability.
- Developed an automated data pipeline to unify metrics from Support, Engineering, and Accounts Management, among others, into a single health dashboard for CXOs.

Zero Trust Access Platform (Emumba)

Secure remote access system enabling identity-based routing and event auditing across distributed agents.

- Engineered high-performance Golang agents that handle over 2Gbps of traffic while cutting CPU usage from 87% to 73%.
- Designed and deployed an event logging pipeline that processes 100K+ daily events across API servers, edge agents, relays, and connector nodes.
- Co-designed a load-balancing solution for cloud-based relay and connector machines.

Analyzer (AAI)

3D traffic simulation and video analytics tool for autonomous vehicle testing and debugging.

- Led re-architecture efforts and offloaded compute-intensive logic to C++ DLLs.
- Enabled support for 19GB+ simulation logs (vs previous limit of 8GB), improving analysis capabilities by 2.4x.

ReplicaR Scenario Portal (AAI)

Custom scenario generation tool for autonomous vehicle simulations used by automotive clients like Audi and Continental.

- Transformed monolithic codebase into modular architecture, scaling concurrent simulations 4x (25 → 100+).
- Led a team of engineers to improve performance and reduce testing bottlenecks.

Constellation (AN10)

Business Intelligence dashboard for monitoring real-time signals from 1800+ IoT devices across edge networks.

- Productized a successful internal hackathon project using Elastic Stack and Apache Spark.
- Delivered analytics capabilities that were later monetized and pitched to enterprise customers.

Skills

Leadership & People Management

- **Team Growth:** Talent Acquisition (Hiring), Engineer Onboarding, Mentorship.
- **Performance Culture:** 360° Feedback Loops, Career Growth Frameworks, Performance Management.
- **Operations:** KPI Definition (DORA Metrics), Process Automation (n8n).

Architecture & Infrastructure

- **Cloud Platforms:** AWS, GCP.
- **Observability:** OpenTelemetry (OTel), Prometheus, Grafana, CloudWatch Dashboards.
- **DevOps:** Kubernetes, Docker, CI/CD Pipeline Optimization (GitHub Actions, Jenkins).

Security & Compliance

- **Frameworks:** SOC 2 Type II Readiness, ISO 27001:2022 Compliance.
- **Tactical Security:** Penetration Testing Remediation, Vulnerability Management.

Technical Stack

- **Languages:** TypeScript, GoLang, Python.
- **Frameworks:** Node.js, React, Nest.js, Inngest, Temporal.
- **Databases:** PostgreSQL, MySQL, InfluxDB, Elastic Stack.

Recognitions

- Star Performer — Emumba, 2021
- Outstanding Performer — AAI, 2020
- Workshop Trainee — AAI Berlin HQ, 2019
- Guest Speaker — Islamabad JS Meetup, 2018

Education

B.E. in Geo-Informatics — National University of Sciences and Technology (NUST), 2016
