

Waleed Ali

Engineering Manager / Staff Software Engineer / Systems Architect

✉ waleedali070@gmail.com |  github.com/WaleedAli070 |  linkedin.com/in/syed-waleed-ali

Summary

Engineering Manager and Systems Architect with 10 years of experience scaling platforms and driving organizational technical strategy. Combines deep expertise in distributed architectures, zero-loss migrations, and security compliance (SOC-2/ISO:27001) with executive leadership. Spearheads company-wide AI adoption frameworks to boost engineering quality and velocity while aligning team performance and deliverability with DORA KPIs.

Experience

Teamo — Engineering Manager *(Aug 2023 – Present / Remote)*

- Directing a team of engineers focused on product delivery, capacity optimization, and technical standards for a wellness platform with 40K+ monthly active users. Standardized onboarding workflows and implemented 360° performance evaluation frameworks across the organization.
- Developed automated cross-functional health dashboards using **n8n**, centralizing Sales, Customer Support, Engineering, and Accounts metrics for executive reporting and board-level visibility.
- Managed technical readiness and successful audit completion for **SOC 2 Type II** and **ISO 27001:2022**; coordinated external penetration testing and vulnerability mitigation efforts.
- Led the architectural overhaul and consolidation of legacy systems into a unified **GCP** environment. Orchestrated a high-stakes financial migration, moving \$954K+ in user balances with zero data loss.
- Guided the modernization of legacy infrastructure toward a modular IaC (AWS CDK) architecture. Deployed **OpenTelemetry (OTel)** for distributed tracing alongside custom CloudWatch monitoring to optimize system reliability and MTTR.

Emumba — Senior Software Engineer *(Jan 2021 – Aug 2023 / Islamabad, PK)*

- Engineered high-performance Go agents that handle over **2Gbps** of traffic while cutting CPU usage from 87% to 73%.
- Designed and deployed an event logging pipeline that processes **100K+** daily events across API servers, edge agents, relays, and connector nodes.
- Standardized interview formats and evaluation rubrics company-wide; designed structured first-week onboarding paths to shorten ramp-up cycles.

Automotive AI — Technical Lead *(Sep 2018 – Dec 2020 | Islamabad, PK)*

- Promoted to **Technical Lead** within one year; leading a 5–7 member engineering team to deliver high-stakes simulation tools for autonomous vehicles for tier-1 automotive partners, including Audi and Continental.
- Led re-architecture of one of the tools by migrating heavy computational tasks to **C++ DLLs**, expanding log processing limits by 2.4x to support datasets exceeding 19GB.
- Orchestrated the transition from a monolithic scenario portal to a modular architecture, increasing concurrent simulation capacity 4x (from 25 to 100+).

AN10, Heurixtics, HireNinja — Software Engineer *(2016 – 2018)*

- Developed Constellation (IoT BI dashboard); handled data from 1800+ devices, commercialized post-hackathon.
- Gained early experience in agile environments, tight delivery schedules, and building products from scratch.

Projects

Round Treasury (Teamo)

Round is the AI-powered finance command system that unifies treasury, payments, FX, and reconciliation in one intelligent platform.

- Identified critical bottlenecks in legacy infrastructure and orchestrated a migration to a modular **AWS CDK** environment, improving maintainability and reducing cloud overhead with enhanced network security.
- Leading the implementation of **OpenTelemetry (OTel)** for distributed tracing and performance monitoring; developed custom CloudWatch dashboards to improve Incident Response (MTTR) and system reliability.
- Contributing to critical financial workflows involving multiple 3rd-party integrations and banking APIs, demanding high diligence and scrutiny.
- Resolved all infrastructure-related findings for ISO 27001:2022 certification, ensuring the platform met strict fintech security requirements.

SoHookd (Teamo)

Wellness platform serving 40K+ monthly users, rebuilt from two legacy codebases into a unified, production-grade system on GCP.

- Leading the AI-adoption initiative across the engineering department, improving productivity while ensuring quality.
- Led re-architecture and full rebuild of the platform, consolidating NoSQL and SQL systems into a unified SQL-based application.
- Executed critical financial data migration, transferring \$954K+ in user balances without losing a single dollar during the platform migration.

- Took over lead responsibility for SOC 2 audits from the CTO; successfully navigated the technical audit process and coordinated with third-party security firms for rigorous penetration testing.
- Managing full-cycle agile delivery, ensuring team capacity is optimized against high-pressure deadlines while maintaining 99.9% platform availability.
- Developed an automated data pipeline to unify metrics from Support, Engineering, and Accounts Management, among others, into a single health dashboard for CXOs.

Zero Trust Access Platform (Emumba)

Secure remote access system enabling identity-based routing and event auditing across distributed agents.

- Engineered high-performance Golang agents that handle over 2Gbps of traffic while cutting CPU usage from 87% to 73%.
- Designed and deployed an event logging pipeline that processes 100K+ daily events across API servers, edge agents, relays, and connector nodes.
- Co-designed a load-balancing solution for cloud-based relay and connector machines.

Analyzer (AAI)

3D traffic simulation and video analytics tool for autonomous vehicle testing and debugging.

- Led re-architecture efforts and offloaded compute-intensive logic to C++ DLLs.
- Enabled support for 19GB+ simulation logs (vs previous limit of 8GB), improving analysis capabilities by 2.4x.

ReplicaR Scenario Portal (AAI)

Custom scenario generation tool for autonomous vehicle simulations used by automotive clients like Audi and Continental.

- Transformed monolithic codebase into modular architecture, scaling concurrent simulations 4x (25 → 100+).
- Led a team of engineers to improve performance and reduce testing bottlenecks.

Constellation (AN10)

Business Intelligence dashboard for monitoring real-time signals from 1800+ IoT devices across edge networks.

- Productized a successful internal hackathon project using Elastic Stack and Apache Spark.
- Delivered analytics capabilities that were later monetized and pitched to enterprise customers.

Skills

- **Engineering Leadership:** People Management, 360° Evaluation Frameworks, Board-level DORA KPIs, Capacity Optimization, and Structured Onboarding.
- **Cloud & Distributed Infrastructure:** AWS CDK/GCP, OpenTelemetry (OTel) Distributed Tracing, CloudWatch Monitoring, Prometheus, Grafana, Container Orchestration (Docker/K8s), and Automated CI/CD.
- **Security & Compliance:** Technical Readiness for SOC 2 Type I/II, ISO 27001:2022 Certification, Vulnerability Mitigation, and Managed Penetration Testing Coordination.
- **Technical Ecosystem & Architecture:** TypeScript, Golang, Python, Node.js, React, NestJS, PostgreSQL, Temporal, and Elastic Stack.

Recognitions

- Star Performer — Emumba, 2021
- Outstanding Performer — AAI, 2020
- Workshop Trainee — AAI Berlin HQ, 2019
- Guest Speaker — Islamabad JS Meetup, 2018

Education

B.E. in Geo-Informatics — National University of Sciences and Technology (NUST), 2016
